

New Immune Therapy Purges Leukemia System Works where Chemotherapy Fails

Smart Sugars Lesson # 50

by JC Spencer

Leukemia has been driven into remission in two out of three patients with immune therapy. So reports oncologist Austin Porter at the University of Pennsylvania in *The New England Journal of Medicine*. Porter said, "What we couldn't do with chemotherapy, we were able to do in four weeks with immune therapy."

Leukemia is the destroyer of white blood cells. Low levels of electrolytes diminish the immune system and reduce the body's energy and ability to fight for life.

This immune therapy trial opens the door for new therapies for leukemia and potentially for millions who are suffering from other cancers.

The strategy of this ingenious trial was to enable the body's own immune system to eliminate the cancer cells. The T-cells identify foreign pathogens and prepares for battle. These "Killer Cells" then signal the macrophage to remove the dead cells.

The system used in this trial was to draw blood from the patients, isolate the T-cells, and infect them with a genetically engineered virus. The modified T-cells were then injected back into the patients.

The research team calculated that for every T-cell injected, a thousand cancer cells were killed. It is normal for the patients to develop flu-like symptom due to the quick removal of the dead cancer cells that are processed from the body by the liver and kidneys.

A newborn baby receives Smart Sugars in mother's breast milk and a superload in the colostrum. It is these sugars that supply the immune system for the child and effects him or

her for life. These sugars construct the glycolipids and glycoproteins which develop the communication system, the actual operating system (OS) for the human body.

It is a recognized scientific fact that when the human immune system is modulated properly that cancer, HIV, other viruses and harmful bacteria are destroyed by the efficient killer cell team.

In the mid-nineties, I personally experienced similar flu-like symptoms when I ate high quantities of Smart Sugars. My next door neighbor was given two weeks to live because he had virtually no white blood cells. His immune system had failed. His family fed him Smart Sugars and he died in the predicted two weeks; however, the doctor conducted one final blood test and said apparently there was an error with the test because he was producing white blood cells again.

ALL roads to health and healing are via of your immune system. ALL roads to your immune system are traveled via glycolipids and glycoproteins. ALL glycolipids and glycoproteins require Smart Sugars.
